

Scrum Retrospective

▼ 🤔 ABOUT:

Total hours planned at the start of the release:

92.5

Total hours completed at the end of the release:

59

This is for covering our analysis and reflections as a team on our Scrum activity.

The key things we are looking at are

- What went right?
- What went wrong?
- What we have learned?
- How do we plan to implement new changes?

TEAM7

Release 0:
Concept

DATE: 02/11/2022

WHAT WENT RIGHT

Aa Name

I think we did well in creating backlog items for ourselves and conducting relevant research. My issues with how we conducted ourselves for these first 5 weeks lie in our burndown charts, we struggled to keep up with all the work that we had thrown at us which resulted in our burndown charts not looking the best.

After each sprint, we would discuss role-by-role what we had researched, what we were considering and what we wanted to / could do next.

Each member of the team contributed their own backlog items

In roles that are divided between multiple team members, those team members each took part of the responsibility for tasks in that role on the scrumwise.

We have a paper prototype completed.

WHAT WENT WRONG

Aa Name

I think most of us found it difficult to estimate hours and points for each task.

We seemed to get most of the work done on the weekends, which makes the burndown charts look rushed, but this is just when it suits most of us to get the work done.

We struggled immensely with getting the sprints started on time and getting tasks done. The bulk of the work was done towards the end of the sprint and a lot of the time all the backlog items would not be finished.

WHAT WE LEARNED

Aa Name

ACTIONS

Aa Name

Mabel and ourselves would like to have some in-person meetings as well so we are currently organising a time for this.

Aa Name

We can be tidier and more organised. Time management is important and we need to allocate more time to this project every week. If we are unable to get a task done we need to make sure to take it out of the sprint or better yet not add it in at all if any of us know in advance, this should also result in better-looking burndown charts.

Team members that share roles, need to coordinate more efficiently.

Sometimes tasks done during the week were not marked as complete until a few days later, we can definitely improve on this and make sure we keep the sprints up to date.

Aa Name

Meetings over zoom at the weekend would probably be a decent solution, we just need to find a time when everyone can meet as of course some of us have weekend jobs/other commitments on weekends.

Plan out tasks more clearly and carefully.

Better communication between members is necessary, we need to come together more times a week to update each other on what is going on, this should result in better organisation.

Communicate with team members consistently.
